

Dear Citizens of Rome,

Every 3 years the City of Rome conducts Lead and Copper sampling throughout our distribution system. This year we are looking for new sampling sites involving single family homes.

The testing involves the homeowner taking a water sample from their tap and leaving it out in front of their homes for the city employees to pick up. With the sampling bottles, there will be instructions on how to take the sample.

If there are any questions or if you are interested in participating, please contact the Water Filtration staff at 315-339-7777. We are there 24hrs a day, 7 days a week.

Respectfully,

Tim Dombrowski

Chief Operator
